

# Chapter 2

## Image Processing

### Digital Color Images

Lecture *Sistemi intelligenti naturali ed artificiali (SINA)* from 15.  
Oct. 2010

The checkerboard illusion:  
The squares marked A and B  
are the same shade of gray.

Edward H. Adelson

Dr. Volker Krüger  
Dept. of Robotics, Brain and Cognitive Sciences  
Italian Inst. of Technology

#### What is Color

Colors and the Human  
Visual System (HVS)  
Additive / Subtractive Color

#### What are Color Space

RGB Color Space  
HIS Color Space  
YUV Color Space  
Why Different Color  
Spaces?

#### Pseudo Color

#### Concluding Remarks

## 1 What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

### What is Color

Additive / Subtractive Color

## What are Color Space

RGB Color Space  
HIS Color Space  
YUV Color Space  
Why Different Color  
Spaces?

## Pseudo Color

## Concluding Remarks

- The colors that humans perceive are determined by the nature of the light reflected from an object! Green objects reflect “green” light!
- **Achromatic**: Only *intensities* (amount of light). Achromatic information ranges from black to white

Example: Gray levels as seen on black/white TV screens.

- **Chromatic**: Lightwaves; Visual range: 400nm-700nm

## Red, Green, Blue

- R,G,B are called **Primary Colors**
- R,G,B are used in cameras
- R,G,B were chosen due to the structure of the human eye

### What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

# Receptivity of the Eye Cells

## What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

## What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

## Pseudo Color

## Concluding Remarks

## Red, Green, Blue=White? Really???

- So why don't we get white, when we use paint?

**Subtractive Color!!**

- But why does it work for the TV?

**Additive Color!!**

### What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

- **Additive Color:** Sum of light of different wave lengths. That light reaches our eye directly.

### Example

- TV, Video Projectors, LCD Monitors

- **Subtractive Color:** White Color is emitted by the sun and is only partially reflected from an object!

### Example

- Red paint filters all light except red!
- Yellow paint absorbs blue, but reflects red and green

#### What is Color

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

#### Pseudo Color

#### Concluding Remarks

# What are Color Spaces?

## What is Color

Colors and the Human  
Visual System (HVS)  
Additive / Subtractive Color

## What are Color Space

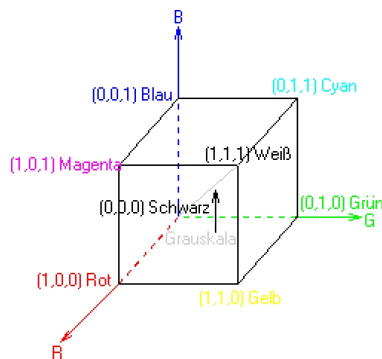

RGB Color Space  
HIS Color Space  
YUV Color Space  
Why Different Color  
Spaces?

## Pseudo Color

## Concluding Remarks

# RGB Color Space

- the *classical* Computer Color space
- 3 different colors: Red, Green, Blue.
- Similar to the human visual system
- If R,G,B have the same energy we perceive a shade of white (gray, black).

## What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

## What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

Pseudo Color

Concluding Remarks

## What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

## What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

Pseudo Color

Concluding Remarks

A single pixel consists of three components:  $[0, 255]$ . Each pixel is a **vector**.

128	251	60
-----	-----	----

 =

Pixel-vector in the computer memory

Final pixel color in the image

## Caution

Sometimes pixels are not stored as vectors but in **Image Bands**. First, the complete red-component is stored, then the complete green, then blue.

## Example RGB

Original Image

Red Band

Green Band

Blue Band

### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

## Color and Intensity are mixed in RGB

- Same Color,
- different intensities
- Chromaticity Plane
- $r + g + b = 1$

### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

## Color and Intensity are mixed in RGB

- Same Color,
- different intensities
- Chromaticiy Plane
- $r + g + b = 1$

### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

## Color and Intensity are mixed in RGB

- Same Color,
- different intensities
- Chromaticiy Plane
- $r + g + b = 1$

### RGB to Chromaticity concersion

$$r = \frac{R}{R + G + B} \quad g = \frac{G}{R + G + B} \quad b = \frac{B}{R + G + B}$$

#### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

#### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

#### Pseudo Color

#### Concluding Remarks

## Another way of separating color and intensity: HSI

- $H$ =Hue,  $S$ =Saturation,  $I$ =intensity
- intensity  $I$ : 
- $H$  and  $S$  may characterize a color: Chromatics

### Hue

- associated with the dominant wavelength in the mixture of light waves, as perceived by an observer.
- is the color attribute that describes a pure color

### Saturation

- relative purity
- amount of white light in the color
- mixed with hue

### Example

Pure colors are fully saturated. Not saturated is, e.g., pink (red+white).

#### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

#### What are Color Space

RGB Color Space  
HIS Color Space  
YUV Color Space  
Why Different Color Spaces?

#### Pseudo Color

#### Concluding Remarks

# HSI Color Space

- Perhaps the most intuitive color representation
- Used in Computer Graphics and Computer Vision

## What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

## What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

## Pseudo Color

## Concluding Remarks

A single pixel consists of three components:  $[0, 255]$ . Each pixel is a **vector**.

128	251	60
-----	-----	----

 = 

Pixel-vector in the computer memory

Final pixel color in the image

## Caution

Sometimes pixels are not stored as vectors but in **Image Bands**. First, the complete red-component is stored, then the complete green, then blue.

### What is Color

RGB Color Space

**HIS Color Space**

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

## Example HSI

Original Image

Hue

Saturation

Intensity

### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

### What are Color Space

RGB Color Space

**HIS Color Space**

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

- YUV: used in commercial color TV broadcasting and video signals
- backwards compatible to the old B/W TV.
- We need a format that decouples grayscale and color: HSI
- “Poor-man’s” HSI because it is much easier to compute from RGB than HSI

## What is Color

Colors and the Human  
Visual System (HVS)  
Additive / Subtractive Color

## What are Color Space

RGB Color Space  
HIS Color Space

## YUV Color Space

Why Different Color  
Spaces?

-----	-----	----

 = 

Pixel-vector in the computer memory

Final pixel color in the image

## Caution

Sometimes pixels are not stored as vectors but in **Image Bands**. First, the complete red-component is stored, then the complete green, then blue.

## Example YUV

Original Image

Y-band

U-Band

V-Band

### What is Color

Colors and the Human  
Visual System (HVS)  
Additive / Subtractive Color

### What are Color Space

RGB Color Space  
HIS Color Space  
YUV Color Space

Why Different Color  
Spaces?

### Pseudo Color

### Concluding Remarks

# So Why Different Color Spaces

## RGB Color space

- + works like Human Visual System (HVS)
- difficult to decouple color from intensity

## HSI Color space

- + a more physically motivated description of color
- + decouples color, intensity and saturation
- difficult to compute

## YUV Color space

- + Simple to compute
- + similar to HSI
- + motivated by broadcasting technology
- + saves memory through biological arguments
- hardly used in Computer Vision and Computer Graphics

### What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

# What is Pseudo Color?

## What is Color

Colors and the Human  
Visual System (HVS)  
Additive / Subtractive Color

## What are Color Space

RGB Color Space  
HIS Color Space  
YUV Color Space  
Why Different Color  
Spaces?

## Pseudo Color

## Concluding Remarks

- **Full Color Images:** Acquired by a (TV/DV) camera, digital camera or scanner
- **Pseudo Color Images:** Assigned a shade of color to a monochrome intensity or range of intensities

### Example

Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

iit

- Achromatic vs. Chromatic
- How come that with RGB we can represent all (all?!?) colors?
- Subtractive Color vs. Additive Color
- Color Spaces
  - RGB: Used in cameras and the HVS
  - Normalized RGB: Decouples intensity and color: Used in Computer Vision
  - HSI: Decouples intensity, hue and saturation: Used in CG and Computer Vision
  - YUV: Used in commercial color TV
- Pseudo color: represent grayscale as colors

### What is Color

Colors and the Human Visual System (HVS)  
Additive / Subtractive Color

### What are Color Space

RGB Color Space  
HIS Color Space  
YUV Color Space  
Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

### What is Color

Colors and the Human Visual System (HVS)

Additive / Subtractive Color

### What are Color Space

RGB Color Space

HIS Color Space

YUV Color Space

Why Different Color Spaces?

### Pseudo Color

### Concluding Remarks

- Questions about the lecture?
- What was good about the lecture and what could have been better?
- How many different  $512 \times 512$  grayscale (8bit) images exist?
- How many different colors exist for 24bit pixel?
- How many different  $512 \times 512$  color (24bit) images exist?

## Questions

- Why can we use RGB to generate almost all pixel colors?
- What is the difference between Achromatic and Chromatic?
- What is the difference between Subtractive Color and Additive Color?
- Describe the four different color spaces (RGB, rg, HSI, YUV)
- What are their characteristics and where are they used?
- What is a pseudo color image?
-  How can a Pseudo color image be generated from a gray value image?
